

Day-16 Python DSA

Missing and Repeating

<https://www.geeksforgeeks.org/problems/find-missing-and-repeating2512/1>

Bruteforce

```
def findTwoElement(arr):  
    repeating, missing = -1, -1  
    n = len(arr)  
  
    for i in range(1, n + 1):  
        count = 0  
        for j in range(n):  
            if arr[j] == i:  
                count += 1  
  
        if count == 2:  
            repeating = i  
        elif count == 0:  
            missing = i  
  
    if repeating != -1 and missing != -1:  
        break
```

```
return [repeating, missing]
```

```
arr = [4, 3, 6, 2, 1, 1]
```

```
findTwoElement(arr)
```

TC – $O(N^2)$

SC- $O(1)$

Better

```
def findTwoElement(arr):
```

```
    repeating, missing=-1,-1
```

```
    n = len(arr)
```

```
    hash_list = [0] * (n+1)
```

```
    for num in arr:
```

```
        hash_list[num] +=1
```

```
    for i in range(1, len(hash_list)):
```

```
        if hash_list[i] ==2:
```

```
            repeating =i
```

```
        elif hash_list[i]==0:
```

```
            missing =i
```

```
        if repeating !=-1 and missing!=-1:
```

```
            return [repeating, missing]
```

```
arr = [4, 3, 6, 2, 1, 1]
```

```
findTwoElement(arr)
```

TC- $O(N)$

SC- $O(N)$

Optimal

```
class Solution: def findTwoElement(self, arr):
```

```
    n= len(arr)
```

```
    sN = (n * (n + 1)) // 2
```

```
    s2N = (n * (n + 1) * (2 * n + 1)) // 6
```

```
    s = 0
```

```
    s2 = 0
```

```
    for num in arr:
```

```
        s += num
```

```
        s2 += num**2
```

```
    val1 = s - sN # x-y
```

```
    val2 = s2 - s2N #  $x^2 - y^2$ 
```

```
    # This is x+y
```

```
    val2 = val2 // val1 #  $(x^2 - y^2) // (x - y)$ 
```

```
    x = (val1 + val2) // 2
```

```
    y = x - val1
```

```
    return [x,y]
```

TC- $O(N)$

SC- $O(1)$
